
Gone are the days when you had to hunt for free mp3 download websites that still offer free downloads - you can just use any of your favorite search engines and find them under the first few listings. It's so easy to find music these days, with this list of 18 mp3 download sites which have either been up for a long time or are new but reliable. I've also compiled a helpful analysis of what makes each one stand out from all the others, so look no further if you want to know which site is best for what.

VideoMp3.co You can sometimes find stuff on here but it is very hit and miss; the same track might be on two or three sites and one of them will be VideoMp3. Some music fans like this because it's like a treasure hunt: you never know what you're going to get, or if you will get it, but that's the fun of it! This site hosts a lot of old Hindi music (and Tamil movies) which is great if that's what you're into, but there's still plenty of variety to be had. If they don't have what you want on their main page then try clicking the "More Results" button at the bottom and searching for your song there. Also, if you like their old Hindi music then it's worth clicking "Subscribe" and then searching for the same thing. Up to the minute releases can sometimes become available on their Twitter feed, but don't count on it. It's not very well maintained and is definitely not as good as some of the others: This site hosts a lot of music from East Europe (a popular region for pop music), and is fairly good at finding things (but it's still hit and miss). The main page has a few samples from sales that have been made on each track, which is useful if you're just looking to find out what sort of thing you might get. You can also subscribe to things, which is good if you want the latest tracks straight away. The site is not very fast and I have noticed that sometimes it doesn't load correctly. This is a classic of the genre, and has been around for a long time! Its main selling point is that new tracks are released every Monday on an album of the week. You can't download any single songs from here – you have to buy them – but this makes it more secure because illegal downloads are less likely to occur. If you do manage to get one illegally then you'll be banned from downloading anything else from here for a certain period of time (I've never had this happen but some people say it does). This site is less prolific than some of its contemporaries but it does host everything for free. Some of the tracks are quite obscure so you might have to do quite a bit of searching to find them, but there are also some pretty good tracks, so it's worth looking around. They seem to have abandoned their focus on Pop music recently though, which limits what you can actually get: I like this site and like to recommend it but I'd personally say that if you want Pop music then try Thess (above) or Gorilla (below). This is probably the most random one.
